Green River at Roachville ‘put-in’

Liberty to Green River Lake

“Upstream Run”

This section of the Green River runs through farmland and along some steep wooded hills, sandbars and brush islands are common at low water. Banks are of mud and vary in steepness. Navigational hazards may include dead falls, log jams and low tree limbs. Access to the river is good in several places and the most common ‘put in’ places are at Liberty and Dunnville. The Liberty to Neatsville Bridge run is about 23 miles and Dunnville to Neatsville Bridge is about 9 miles. Private property limits camping possibilities on the upper portion of the river. The lower portion, below the confluence of Barnett Creek, is part of the Green River Lake Project and camping is prohibited in this area. Class 1 rapids with a few ripples and small waves are in this section of the river and make for interesting paddling. This section is most runnable from November through June.

Green River Lake

Green River Lake Dam to Greensburg

“Downstream Run”

This section of Green River flows along some steep wooded hills and through farmland. This is a popular canoeing section which flow depends on the release of water from the Green River Lake Dam. Although extremely low releases may necessitate short portages over gravel bars, this stretch normally is runnable in the summer months. High water can cause an increase in navigational hazards such as dead falls or log jams. At normal water levels, the ripples do not exceed a Class 1 rapid. Access is generally good, although this part of the river is more secluded than the section above the lake. Common ‘put in’ places are the Tailwater of Green River Lake Dam and Roachville. The Dam to Roachville is about 14 miles and from Roachville to the American Legion Park at Greensburg is about 10 miles. This section is runnable for most of the year.

NOTE: Fifteen miles is a day’s trip for most people.

Your Safety Is Our Concern

Canoe User Safety Guidelines

1. Life vests should be worn at all times while on the river
2. Do not sit on the sides of the canoes, use the seats
3. Do not wear open-toed shoes in the canoes
4. No drugs or alcohol should be allowed in canoes at any time. No person under the influence of drugs or alcohol should operate a canoe under ANY circumstances.
5. Canoes are to be operated by no less than two individuals, as it is difficult and unsafe to maneuver a canoe alone. Maximum occupancy is the maximum poundage listed for the canoe model/size. **DO NOT OVERLOAD YOUR CANOE.**

Canoe User Helpful Hints

You can quickly and easily master getting in and out of a canoe without getting wet if you remember the following important points:

- ☑ Keep your center of gravity low and move slowly and deliberately.
- ☑ Transfer your weight slowly from shore to the bottom of the canoe
- ☑ Board your canoe directly into your paddling position whenever possible
- ☑ For maximum control and stability, always kneel in the canoes even though some canoes have seats.
- ☑ To get out of the canoe, simply reverse the process described above
- ☑ If you have capsized, relax and make contact with the canoe with your hands if you have not already done so. Stay upside down long enough to extract your legs and feet from the canoe. Keep eyes open and check for other party members.
