

Steliko Lookout Heater Instructions

Use the thermostat (circled in yellow) to turn the heater on and off. The bottom tab will slide to the right to turn on. Set the desired temperature for the lookout. Slide the tab to the left to turn off the heat. Please leave the thermostat in the off position when you leave.

The valve to the propane heater should be left open as shown in the picture. The red valve will be parallel to the yellow hose. This valve is located to the left of the Empire heater under the cook top stove counter.

Scan QR code to watch winter instructions for Steliko Lookout

Scan QR code to watch video on lighting the Empire heater pilot light if it is out. The pilot light should be left on once it is started. Additional instructions on starting the Empire heater pilot light are below.

If you cannot get the Empire heater working there is a secondary portable propane heater in the lookout. The 1lb disposable LP-gas supply cylinder is not provided. You will need to bring your own. Please scan the QR code to see how to operate the portable heater. Additional instructions are below.
